Arboricultural Impact Assessment – Supplementary Report

Client: Pageant Investment Development Ltd. **Site name:** Cockreed Lane, New Romney, TN28 8JH

This report is to be read in conjunction with 'Arboricultural Impact Assessment (GE030_RP_001-D), Tree Survey Plan (GE030_DR_001) and Tree Protection Plan (GE030_DR_002- REV E)

As of March 2020, the 'Proposed Landscape Scheme' (Drg. No. 322/101) for this site has been updated, requiring the additional removal of T10 in order to enable the development. T10 is a semi-mature, small oak, which is in the relatively early stages of establishment – though established enough to no longer be classed as 'young'. T10 has a significant unevenness to its canopy, due to being suppressed. Furthermore the tree is currently offering little in the way of amenity value due to its size, therefore only being visible once on site. It is a 'C' grade tree which should not constrain development by removal.

Therefore, in order to facilitate development, a total of 3 'B' grade trees, 4 'C' grade trees, 3 'C' grade groups and 1 'C' grade hedge will require removal. In addition, 1 'U' grade tree should be removed for reasons of sound arboricultural management due to its poor condition. As the majority of trees being removed are of 'C' grade value, the anticipated planting scheme should act to mitigate for the losses of trees as a whole.

Yours sincerely,
