Dear Planning Officer,

I live in Stanford North and regularly walk the footpaths around Pent Farm and onto Pent Downs.

Pent Farm already provide habitat protection for wildlife to increase biodiversity on their land. I regularly see amazing insects, birds and animals around the pond, waterways and verges.

I support the solar project for its important green energy production that contributes to sustainability.

I'm really pleased to see that the plans include measures to further increase the biodiversity in the local area - with new habitats for wildlife.

Kind regards,

Sue Hannah

Dear Planning Officer,

For me the need for green energy production is highly important. We, as a society, need to embrace the progression of clean, renewable energy and help to push the advancement in technology so as to improve it's efficiency and make it our primary energy source.

I do feel we should not blindly adhere or accept barbaric proposals for over constructed and damaging projects, that alter the environment in a way that it can not recover.

We need to stop damaging our soils and over farming the land. Supporting this project would help, one farm, do exactly that. Be diversifying the income of large land owners and farmers, we stop the destruction of top soil and give the land a respite to recover and promote native species of plants and animals. This project promises some regenerative agriculture to help local species and improve the biodiversity in the local area.

The visual impact is minimal, as it is a low level solar farm, so not visble from the majority of locations.

I feel this project should be given the support it needs to be granted approval.

Kind regards,

Alistair McLeod

Dear Planning Officer,

This is a good use of the land on Pent Farm. Not only is it creating electricity but the land is also being used for farming. This country needs all the renewable energy it can create, and rather than just a field of solar panels, the land is also being used for the original farming plans, as it should be This is a win-win situation and I wish other electricity generators would use the land for farming as well as solar panels.

This is the proper way to site solar panels, both creating electricity AND using the land for its original agricultural use.

I support this project wholeheartedly.

Kind regards,

Dear Planning Officer,

I think this is a good think. Renewable energy, with minimal environmental impact.
I used to be Facilities and Engineering Manager for United Kingdom Centre for Ecology and Hydrology.
As well as having solar on site, we were adjacent to attle grazing pastures with solar cells.

I feel it is a positive thing, the land can be reverted in time if necessary, the land could still be grazed.
There could be a possibility of planting orchards between the arrays as well.

I would encourage more planting/ provision of biodiversity habitats. Whilst not tokenistic, I feel more could be done in terms of providing a larger area for biodiversity habitat/rewilding and/ or grazing to make more use of the surrounding land.

I am in favour of this development with the above comments being noted.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Planning Officer,

Dear Planning Officer,

Support for New Solar Farm at Pent Farm - 23/0580/FH

I am writing to express support for the planning application 23/0580/FH for a new solar farm at Pent Farm, Postling, Hythe.

Folkestone & Hythe District Council declared a Climate Emergency in 2019 and has ambitions for achieving net zero across the district by 2030. This new solar farm will contribute approximately 19GWh of clean renewable solar energy, making a significant contribution to Folkestone & Hythe's objective to be net zero within the District by 2030.

As solar panels have a small footprint, the land between each solar panel will be converted to grassland and be used as grazing land by livestock which we support. It's also welcomed that the project will bring biodiversity gains from the planting of wildflowers and hedgerows.

The plans will deliver substantial economic benefits, such as construction jobs and high skilled jobs, as well as other knock on benefits.

Finally, the plans for a new solar farm in Hythe will help to create a sustainable future for generations to come and should be fully supported by the council.

Yours faithfully,
Emily Brice

Kind regards,

Emily Brice

Dear Planning Officer,

I am a VERY keen supporter of renewable energy projects generally, which must be the way forward for this heavily polluted planet. Pent Farm, on the south-facing North Downs escarpment would seem to me to be an ideal location, with minimal intrusion into the daily lives of the people who consume the energy which will be duly generated.

I hope that our local council will agree with my thinking, and duly endorse the plans.

Kind regards,

Geoff Lloyd

Dear Planning Officer,

Dear councillors, scientists have made it clear we need to use left energy and transition to cleaner energy if we are to avoid the worst of the effects of global warming. The Pent Farm solar project goes in that direction. They also mitigate their impact on wildlife by creating suitable habitat. I fully support this project as it will support local community to be less dependant on oil and gas. Thank you
Best regards

Kind regards,

Elise Moss

Dear Planning Officer,

All forms of renewable energy are the way forward. Fossil fuels are not a finite form of energy, they are also dirty and create issues for climate change, and all inhabitants of this earth. Solar on an area that is unable to be farmed but is not green belt is an ideal use for the land. Ideally every property and building should have solar. People need to understand that we're protecting our children and their children from the destructive forces of climate change. It is real and those uneducated on the subject can watch 'The age of stupid' it explains climate change and why we need to change things urgently. Solar panels are not unsightly and have no detrimental effect on health as fossil fuels do. So instead of being a NIMBY get educated and support change for the future of our planet!

Kind regards,

Paula Priest

Dear Planning Officer,

In the early 70 my Father had a Vision that I. Years to come the world would be looking at wind power and Solar as well as Tidal, they would joke and call him the Windmill Man I bet they are not lagging now

We had Solar panels installed on our roof at home in Blyth in the North East of England when they were never heard of

Blyth is at the forefront and had the first Windmills installed on the pier in the UK and has a company looking into tidal and wave power.

As a son of a visionary I think it is all day wrong to oppose progress especially when we are in the middle of one of the worst economic climates with people not being able to afford to use their electric.

With the Solar and the back up Batteries this allows the best use of the daylight to charge the batteries with the excess Solar Power and release Electricity Back to the Grid when needed most stopping the use of fossile fuels being used and adding Carbon into the atmosphere.

I have heard the arguments about land not being used for Agriculture but you can still graze sheep year round in and around the Solar Panels still allowing the Local Farmers to earn a living from poor land not suitable for other crops.

If we do not allow new ways of creating Electricity we will be solely more reliant on Nucular and Coal/ Gas Turbines and I know what I would prefer to have in Kent.

Please have a vision for the future and for our Children's Future and GRANT the Nesessary Planing Permission to allow this Project to commence.

Kind regards,

David Henderson
